

WATCHARAPOL PHONGWILAI

Software Developer

☎ 099-185-7733 @ ph.watcharapol@gmail.com 🌐 <https://github.com/rushmi0> 📍 Bangkok, Thailand

SUMMARY

Software Developer with a focus on Kotlin and the JVM ecosystem. Experienced in building backend development and mobile applications. I enjoy improving internal workflows and have practical experience in streamlining system setups using Docker.

EDUCATION

Information Technology (IT)	GPA
Thai-Nichi Institute of Technology	2 / 4.0

EXPERIENCE

Bright & Better Co., Ltd.

Systems Developer

📅 04/2025 - 05/2026 📍 Bangkok, Thailand

DevOps & Internal Tooling

- Assisted in reducing deployment configuration errors to near zero by building a custom Application Installer for deploying legacy systems on Windows.
- Decreased environment setup time from several hours to under 12 minutes by containerizing legacy applications using Docker.

Manufacturing & Production Systems

- Built a Work Order Management system to track production timelines, machine allocation, and material usage.
- Developed lot-allocation logic to optimize container utilization, reducing storage waste and improving packing efficiency.
- Designed and built a reusable approval workflow module with email notifications, allowing it to be adopted across multiple projects 100%, and enforced Role-Based Access Control to relevant data access across user roles.
- Developed a dynamic pricing and quotation system to handle fluctuating raw material costs and maintain historical pricing records.
- Built an invoice module supporting manual creation, including Credit and Debit Notes.

Contract & Revenue Management Systems

- Built a contract management system replacing spreadsheet-based processes, improving usability while supporting Excel imports for data migration.
- Implemented a revision history feature for contracts, enabling users to track and compare data changes across different versions.
- Implemented an invoice generation module and implemented data interfacing with accounting software.
- Developed API to ingest and process revenue data from external systems.

Castrico Co., Ltd.

Mobile Developer (Internship)

📅 10/2024 - 12/2024 📍 Tokyo, Japan

- Developed an offline-first Android application for inventory tracking, improving usability for warehouse and field operations.
- Improved data lookup performance by optimizing QR code scanning and integrating local storage.
- Implemented CSV import/export functionality for efficient data backup and transfer.
- Built a user management system with role-based access control for administrative operations.

SKILLS

Languages

Kotlin, Java, C#, HTML/CSS, SQL, NoSQL

Framework

Micronaut, Spring boot, KMP/CMP, React

Tools

Linux, Docker, Android Studio, JetBrains IDE
Git, Gradle, Excel Macro

PROJECTS

Nostr Relay

- 🌐 <https://github.com/rushmi0/Fenrir-s>
- Built a message delivery system for a decentralized social network, allowing users to share data without relying on a single central server.
 - Built a communication hub for a decentralized network, allowing users to send and receive data.
 - Added a full-text search feature to help users find specific messages or events easily.
 - Designed the system to be flexible, making it easy to add more features or protocols later.
 - Simplified the setup process, so the app can run on different computers or servers with minimal configuration.

ZapPOS

- 🌐 <https://github.com/SiamDevTeam/ZapPOS>
- Developed a POS system to support both Mobile and Desktop.
 - Used Nostr protocol for real-time ordering and data backup, enabling the app to operate without a dedicated backend.
 - Focused on accessibility, ensuring the app runs on standard smartphones and PCs to provide a free tool for general users.
 - Built inventory and sale order features, including product categories, pricing, and basket calculations.
 - Implemented transaction history to track past orders and verify sales data.

GENESEC

- 🌐 <https://github.com/rushmi0/genesec>
- Developed an application for generating Bitcoin WIF keys and Nostr key pairs securely.
 - Implemented mnemonic (BIP39) generation, allowing users to choose between 12, 15, 18 or 24 words
 - Built a time-lock smart contract for Bitcoin, enabling funds to be unlocked only after a specified block time.
