

WATCHARAPOL PHONGWILAI

Software Developer

☎ 099-185-7733 @ ph.watcharapol@gmail.com 🌐 <https://github.com/rushmi0> 📍 Bangkok, Thailand

SUMMARY

Software Developer with a focus on Kotlin and the JVM ecosystem. Experienced in backend services, mobile applications, and Docker for system setup and deployment.

EXPERIENCE

Bright & Better Co., Ltd.

Systems Developer

📅 04/2025 - Present 📍 Bangkok, Thailand

DevOps & Internal Tooling

- Built a custom auto-installer for legacy web applications to replace difficult manual setups, which reduced configuration errors to zero.
- Used Docker to containerize legacy applications, cutting environment setup time from several hours to under 12 minutes, helping the team start working faster.

Manufacturing & Production Systems

- Developed a Work Order Management system to track production and machine use, helping the factory see real-time progress and manage resources better.
- Developed smart logic for stock allocation to fill boxes automatically, which reduced manual work and calculation errors for warehouse staff.
- Created a reusable Approval Workflow with email alerts and roles, which is now used as a standard tool to accelerate development in other projects.
- Built an Invoice module that supports manual creation, including Credit and Debit notes, to handle all billing needs in one place.

Contract & Revenue Management Systems

- Built a Contract Management system to replace slow spreadsheet work and added an Excel Import feature to help users transfer their existing data into the new system, and a Revision History so they can track and compare changes across versions.
- Created a tool that sends billing data to the accounting system (mcframeGA). Users can select and send data with one click, which reduces manual typing and errors.
- Developed APIs to process revenue data from external systems, making it easier to collect and manage financial information.

Castrico Co., Ltd.

Mobile Developer (Internship)

📅 10/2024 - 12/2024 📍 Tokyo, Japan

- Developed an offline-first Android app for warehouse inventory, allowing staff to keep working even in areas without internet.
- Improved scanning speed and data lookup by QR code tools, helping workers process items much faster.
- Added CSV Import/Export features for easy data backup and transfer between devices.
- Built a User Management system with security roles to control who can access specific data in the app.

TECHNICAL SKILLS

Languages

Kotlin, Java, C#, HTML/CSS, SQL, NoSQL

Framework

Micronaut, Spring boot, React, Dioxus, Compose Multiplatform (KMP/CMP)

Tools

Linux (Fedora), Docker, Android Studio, JetBrains IDE Git, Gradle, Postman, Excel Macro

PROJECTS

Nostr Relay

🌐 <https://github.com/rushmi0/Fenrir-s>

- Designed and implemented a decentralized message relay system based on the Nostr protocol, handling real-time event distribution.
- Added full-text search for efficient querying, helping users find specific messages and events.
- Ensured compatibility between JVM and GraalVM native image, improving reliability across runtime.
- Designed the system to be extensible, allowing new features and protocols to be added.

ZapPOS

🌐 <https://github.com/SiamDevTeam/ZapPOS>

- Developed a POS tool for Mobile and Desktop to help small business owners manage sales easily without needing a central server
- Used Nostr protocol for real-time ordering and data backup, ensuring the system is reliable and works even without a dedicated backend.
- Built inventory and sales tracking features, including price calculations and history logs to help users check their daily income.

GENESEC

🌐 <https://github.com/rushmi0/genesec>

- Developed an application for generating Bitcoin WIF keys and Nostr key pairs securely.
- Implemented mnemonic (BIP39) generation, allowing users to choose between 12, 15, 18 or 24 words
- Built a time-lock smart contract for Bitcoin, allowing funds to be unlocked only after a specific time.

EDUCATION

Bachelor of Information Technology

Thai-Nichi Institute of Technology
