

WATCHARAPOL PHONGWILAI

Software Developer

☎ 099-185-7733 @ ph.watcharapol@gmail.com 🌐 <https://github.com/rushmi0> 📍 Bangkok, Thailand

SUMMARY

Software Developer with a focus on Kotlin and the JVM ecosystem. Experienced in backend services, mobile applications, and Docker for system setup and deployment.

EXPERIENCE

Bright & Better Co., Ltd.

Systems Developer

📅 04/2025 - Present 📍 Bangkok, Thailand

DevOps & Internal Tooling

- Assisted in reducing deployment configuration errors to near zero by building a custom Application Installer for deploying legacy systems on Windows.
- Decreased environment setup time from several hours to under 12 minutes by containerizing legacy applications using Docker.

Manufacturing & Production Systems

- Built a Work Order Management system to track production timelines, machine allocation, and material usage.
- Built lot allocation logic to fill box capacity from stock and create new lots for remaining items.
- Designed and built a reusable approval workflow module with email notifications, standardized for reuse across multiple projects, with Role-Based Access Control
- Built an invoice module supporting manual creation, including credit and debit notes

Contract & Revenue Management Systems

- Built a contract management system to replace spreadsheet-based workflows, with support for Excel import.
- Added contract revision history to track and compare changes across versions.
- Implemented invoice generation and integration with accounting systems (mcframeGA).
- Developed APIs to process revenue data from external systems.

Castrico Co., Ltd.

Mobile Developer (Internship)

📅 10/2024 - 12/2024 📍 Tokyo, Japan

- Developed an offline-first Android application for inventory tracking in warehouse operations.
- Improved data lookup performance by optimizing QR code scanning and integrating local storage.
- Implemented CSV import/export for data backup and transfer.
- Built user management with role-based access control.

TECHNICAL SKILLS

Languages

Kotlin, Java, C#, HTML/CSS, SQL, NoSQL

Framework

Micronaut, Spring boot, KMP/CMP, React, Dioxus

Tools

Linux, Docker, Android Studio, JetBrains IDE
Git, Gradle, Postman, Excel Macro

PROJECTS

Nostr Relay

🌐 <https://github.com/rushmi0/Fenrir-s>

- Designed and implemented a decentralized message relay system based on the Nostr protocol, handling real-time event distribution.
- Added full-text search for efficient querying, helping users find specific messages and events.
- Ensured compatibility between JVM 21 and GraalVM native image, improving reliability across runtime environments.
- Designed the system to be extensible, allowing new features and protocols to be added.

ZapPOS

🌐 <https://github.com/SiamDevTeam/ZapPOS>

- Developed a POS system to support both Mobile and Desktop.
- Used Nostr protocol for real-time ordering and data backup, enabling the app to operate without a dedicated backend.
- Focused on accessibility, ensuring the app runs on standard smartphones and PCs to provide a free tool for general users.
- Built inventory and sale order features, including product categories, pricing, and basket calculations.
- Implemented transaction history to track past orders and verify sales data.

GENESEC

🌐 <https://github.com/rushmi0/genesec>

- Developed an application for generating Bitcoin WIF keys and Nostr key pairs securely.
- Implemented mnemonic (BIP39) generation, allowing users to choose between 12, 15, 18 or 24 words
- Built a time-lock smart contract for Bitcoin, enabling funds to be unlocked only after a specified block time.

EDUCATION

Bachelor of Information Technology

Thai-Nichi Institute of Technology
