

WATCHARAPOL PHONGWILAI

Software Developer

☎ 099-185-7733 @ ph.watcharapol@gmail.com 🌐 <https://github.com/rushmi0> 📍 Bangkok, Thailand

SUMMARY

Software Developer focused on **Kotlin and the JVM ecosystem**. Experienced in building scalable backends and using Docker to ensure consistent environment and simplify application deployment. Beyond core development, I actively explore Nostr protocol and Compose Multiplatform to build efficient, decentralized applications.

EXPERIENCE

Bright & Better Co., Ltd.

Systems Developer

📅 04/2025 - 04/2026 📍 Bangkok, Thailand

DevOps & Internal Tooling

- Streamlined setup procedures for legacy software by creating a custom Installer on Windows, resulting in a 100% reduction in configuration errors and improved deployment reliability.
- Improved onboarding efficiency by containerizing legacy environments with Docker, reducing setup time from hours to minutes.

Manufacturing & Production Systems

- Developed a Work Order Management system to track production timelines, machine allocation, and material usage.
- Designed and implemented lot-allocation logic to fill partially empty containers before starting new ones, optimizing storage efficiency.
- Implemented a workflow approval system with email notifications for approvers and requesters.
- Designed and Implemented Role-Based Access Control to manage data visibility, ensuring users only access information relevant to their roles.
- Developed a Dynamic Pricing & Quotation system to handle fluctuating raw material costs and historical price tracking.

Contract & Revenue Management Systems

- Developed a Waste Contract system supporting manual entry and bulk data processing via Excel imports.
- Implemented a revision history feature for contracts, enabling users to track and compare data changes across different versions.
- Implemented an invoice generation module and implemented data interfacing with accounting software.
- Developed API to ingest and process revenue data from external systems.

Castrico Co., Ltd.

Mobile Developer (Internship)

📅 10/2024 - 12/2024 📍 Tokyo, Japan

- Developed an offline Android app for inventory tracking, focusing on ease of use for warehouse staff and field workers.
- Enhanced lookup speed, improving efficiency with QR code scanning and local data storage integration.
- Implemented CSV import/export enabling data backup.
- Implemented a User Account Management System, allowing administrators to create, modify, delete accounts, and enforce role-based access control.
- Built a Log System to track user activities for auditing and debugging purposes.

SKILLS

Languages

Kotlin, Java, JavaScript, SQL, NoSQL

Framework

Micronaut, Spring boot, KMP, React

Tools

Linux, Docker, Android Studio, JetBrains IDE
Git, Gradle, Qodana, Excel Macro

PROJECTS

Nostr Relay

🌐 <https://github.com/rushmi0/Fenrir-s>

- Built Nostr Relay for a censorship-resistant global network per Nostr protocol.
- Created scalable architecture for NIP features and extensions.
- Built a Nostr Relay that handles data transmission using NIP-01 standard, enabling decentralized communication through Event (data entries) and Filters (data queries).
- Aided Nostr ecosystem by easing relay setup and promoting adoption among Thai developers.

GENESEC

🌐 <https://github.com/rushmi0/genesec>

- Developed an application for generating Bitcoin WIF keys and Nostr key pairs securely.
- Implemented mnemonic (BIP39) generation, allowing users to choose between 12, 15, 18 or 24 words
- Built a time-lock smart contract for Bitcoin, enabling funds to be unlocked only after a specified block time.

EDUCATION

Information Technology (IT)

Thai-Nichi Institute of Technology
